

elexon launches new website

Website relaunch with a new, dynamic design and a wide variety of information: www.elexon-charging.com

elexon GmbH, 360-degree system provider for holistic e-mobility solutions, is unveiling its new web presence. Users can now access comprehensive information about elexon's charging infrastructure solutions at: www.elexon-charging.com.

Aachen, 04/07/2022

- **A modern, clear cut design with a high level of user friendliness**
- **Comprehensive information about our 360-degree charging infrastructure solutions**
- **Added value for (potential) customers, e-mobility inquiries, and the media**

Design and Function

Extensive information presented in a dynamically modern and user-friendly structure, formulated in a concise and accessible manner. The new elexon website informs users about everything related to our 360-degree service for charging infrastructure solutions. The visual imagery and copy are welcoming and informative, providing a good overview of even the most complex, technical information. Everything a user needs to know is at their fingertips - quickly and intuitively: AC and DC charging stations, various installation concepts (above, as well as below ground) including underground engineering and metal work, a billing backend (elexon charging and the SAP e-Mobility backend) and our energy and load management system. Our comprehensive service and maintenance offerings, including professional subsidy consulting and our green power option, are also dealt with in detail. The focus of our new online presence is to emphasize the long-term benefits of a 360-degree service provider for an efficient, transparent and reliable charging infrastructure.

“Our new website reflects who we are, where we stand on the market and, above all, what we stand for: a tried and true 360-degree service concept with a high degree of individuality and exceptional technical know-how. We don't just provide charging stations; we offer the full range of services for a well-functioning charging infrastructure. Our sustainability philosophy ranges from product development and low-CO2 manufacturing “Made in Germany” to a green electricity tariff.” explains Managing Director Marcus Scholz.

About elexon

Elexon is a joint venture of SMA Solar Technology AG (SMA), AixControl GmbH and aixACCT charging solutions GmbH founded in 2019 with the goal of promoting the expansion of charging infrastructures for electric vehicles across Europe.

Elexon is a full-service provider and, thanks to the merger, now has access to all the necessary expertise from the field of electromobility. Its focus is on charging infrastructures, energy and load management, and the provision of electricity through renewable energies.

With its 360° charging infrastructure solutions, elexon offers its customers single-source, holistic plug-and-play solutions for the planning, installation and service of efficient e-vehicle charging parks.
